

## sera Phyto med Catappa

The herbal water treatment sera Phyto med Catappa contains an extract from Indian almond tree leaves (*Terminalia catappa*) as an effective agent against fungi, bacteria and ecto parasites. It is the first water treatment for aquarium care based on Catappa leaves. Compared to normal extracts or mere addition of Catappa leaves, sera Phyto med Catappa is effective up to 10 times more.

sera Phyto med Catappa is suitable for treating:

- bacterial diseases (e.g. fin rot); supports healing in case of infection with different bacteria such as *Aeromonas hydrophila*, *Pseudomonas* spp., *Edwardsiella tarda*, *Plesiomonas shigelloides*, *Enterobacter* spp., *Shewanella putrefaciens*, *Streptococcus* sp., *Staphylococcus* sp.
- Infections by fungi
- Spawn fungus
- *Trichodina* sp.

Furthermore it reduces the infestation by *Gyrodactylus* sp. and *Dactylogyrus* sp.

sera Phyto med Catappa also supports recovery after having overcome a disease: Wounds close more quickly, and the risk of a secondary bacterial infection or a secondary infection by fungi is considerably reduced. The efficiency of other treatments from the Phyto med range is improved by using sera Phyto med Catappa. Suitable for ornamental fish in aquariums.

Dosage: 5 ml to 40 liters of aquariumwater

Unit: 50 ml (range: 400 l)
